## Summary

---

I am a Graduate in Engineering with strong problem solving skills, a passion for learning, and expertise in programming. Looking for a challenging role to utilize my skills. Interested in contributing to the success of an innovative organization by delivering high-quality software solutions.

## Technologies

---

- Python
- MySQL
- HTML & CSS
- Linux

## Education

---

|                                                 |                                  |
|-------------------------------------------------|----------------------------------|
| <b>B.E Computer</b> – 8.09 GPA                  | June 2019 – June 2023            |
| Sandip Institute Technology and Research Centre | Savitribai Phule Pune University |
| <b>H.S.C</b> – 63.23 %                          | July 2018 – May 2019             |
| Arts, Commerce And Science College              | Maharashtra State Board          |
| <b>S.S.C</b> – 85.00 %                          | June 2016 – March 2017           |
| P. R. Highschool                                | Maharashtra State Board          |

## Experience

---

|                                                                                                                                                                                                                                                                                                                                                                                                                 |                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>AI Engineer Intern</b> , STSARC                                                                                                                                                                                                                                                                                                                                                                              | Apr 2025 – Present    |
| <ul style="list-style-type: none"><li>• Developed a customer support chatbot from concept to deployment, successfully training the model to respond to common inquiries and improving the user experience.</li><li>• Leveraged NLTK and TextBlob to perform text processing tasks, contributing to the successful creation and implementation of a self-learning conversational tool.</li></ul>                 |                       |
| <b>Web Developer</b> , Freelance                                                                                                                                                                                                                                                                                                                                                                                | May 2025 – July 2025  |
| <ul style="list-style-type: none"><li>• Developed and launched a full-stack business landing page for Sunrise Lab, a diagnostic and specialty lab, significantly improved the client's online lead generation.</li><li>• Managed the end-to-end development lifecycle, from initial design with HTML, CSS, and JavaScript to deployment on Vercel, ensuring a responsive and user-friendly interface.</li></ul> |                       |
| <b>Intern</b> , Internship Studio                                                                                                                                                                                                                                                                                                                                                                               | June 2022 – July 2022 |
| <ul style="list-style-type: none"><li>• Assisted in the development of a basic natural language processing (NLP) model under supervision, contributing to a project focused on translating and categorizing text data.</li><li>• Cleaned and preprocessed raw text data to prepare it for model training, ensuring data quality and consistency for the final application.</li></ul>                            |                       |
| <b>Web Developer Intern</b> , HummingByte Pvt. Ltd.                                                                                                                                                                                                                                                                                                                                                             | Feb 2022 – Mar 2022   |
| <ul style="list-style-type: none"><li>• Engineered and maintained clean, well-documented code for various site components, ensuring accessibility and consistency across the platform.</li><li>• Optimized user interfaces by implementing responsive designs with HTML and CSS, resulting in an improved site experience for visitors on both mobile and desktop devices.</li></ul>                            |                       |

## Projects

---

### Automated Bird Species Identification Using Audio.

- Designed and implemented a system for identifying bird species from audio recordings, utilizing advanced signal processing techniques like Mel-Frequency Cepstral Coefficients (MFCCs) for feature extraction.
- Built a robust classification pipeline in Python, and designed and trained a Convolutional Neural Network (CNN) model using TensorFlow and scikit-learn for accurate species identification.

### Library Management System.

- Engineered a full-stack Library Management System as a personal project to streamline operations and provide an intuitive user experience.
- Implemented core functionalities including secure user authentication, a comprehensive book search engine, and a robust system for managing check-ins, check-outs, and overdue items.
- Developed the backend using Python and the Django framework with a PostgreSQL database, while designing a responsive and user-friendly front-end with HTML, CSS, and JavaScript.

### Pathology Lab Website.

- Implemented key functionalities including a secure online appointment booking form and a detailed informational section on lab services.
- Developed the full-stack application using the Django framework with a PostgreSQL database, and built a responsive front-end with HTML, CSS, and JavaScript.
- Managed media assets with Cloudinary and deployed the final application on Vercel, ensuring high performance and reliability.

## Certifications

---

- Linux System from Great Learning.
- Python Programming from Infosys Springboard
